# StarTypes

## Four Relationship Families

### The Loved One Object of Attention

The role of the loved object, the object of affection. Fun-loving, warm, touchy-feely, intuitive, creative, social, the center of attention.

### The Lover The Caretaker

The role of the lover and caretaker of the relationship. Attentive, aware, organized, analytical, kind, shy, not-so-social, mental, conceptual.

### Independent Plays Both Roles

Can play either role, of lover or loved one, depending on the StarType they hook up with. Independent, self-sufficient, self-absorbed, can think and do.

### Many Relations Thirst for Experience

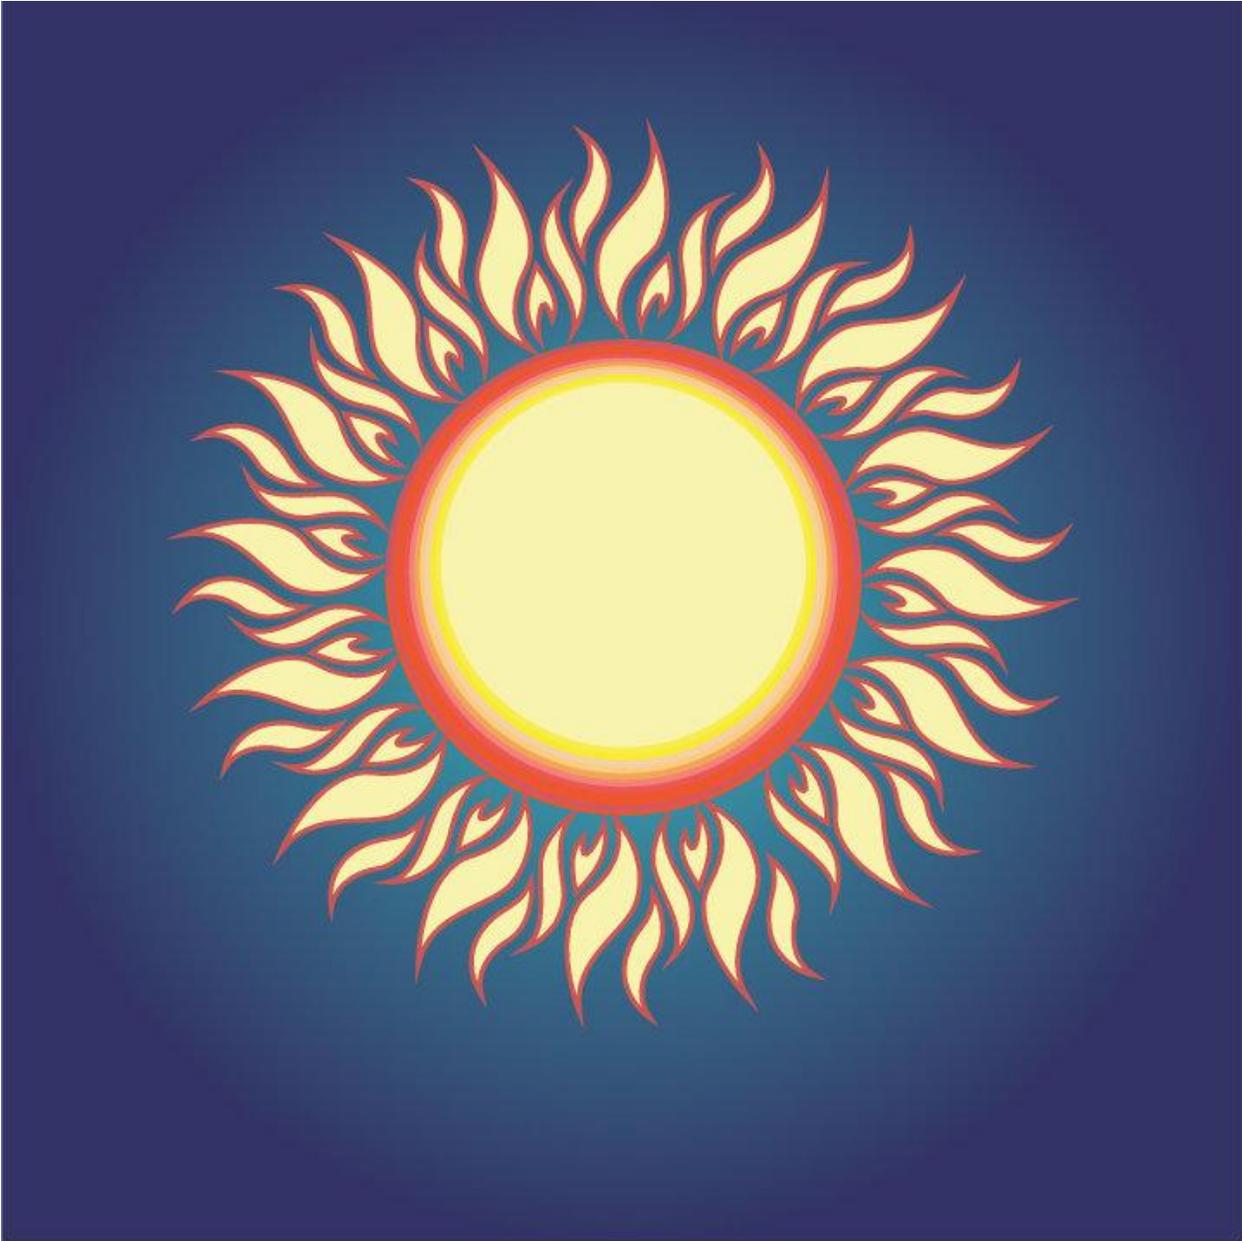

Prefers the role of the lover or caretaker, but is not shy as the green cards are. Instead has a thirst for experience, to meet new people, see new places.

## Which Role Do You Prefer in Relationships?

StarTypes charts the overall planetary pattern in the solar system at the time of birth, offering another view of yourself than traditional astrology offers, a second opinion or perspective on who you, what your talents can be, and what kind of partners you might choose to achieve the best chemistry and balance.
