

## LARGE SOLAR FLARE DIRECTED AT EARTH April 12, 2013

By Michael Erlewine ([Michael@Erlewine.net](mailto:Michael@Erlewine.net))

We have not had a large solar flare for some time, not to mention one that is hurling solar plasma directly at Earth, or at least so that it will impact us.

This M6.5-Class flare took place yesterday at 3:16 AM EDT (April 11th, 2013) and included a CME-Event, a coronal mass ejection and this time the plasma is directed at Earth itself, which mean a geomagnetic storm by this weekend. It will begin to be absorbed starting early Saturday morning.

This will mean visible aurorae and magnetic storms at high latitudes as the CME plasma impacts Earth.

I don't want to repeat everything I have written on solar flares and CMEs, but the free e-books, videos, and articles can be found here, under "astrology" in e-book, articles, and video form:

<http://spiritgrooves.net/#&panel1-1>

Suffice it to say that the above writings and video are concerned not so much with the physical effects on Earth (like aurorae or magnetic storms), but rather with how this intense solar activity effects us emotionally, psychologically, and spiritually.

In brief: we live at the mercy of the Sun's light and activity. When the Sun spews forth massive outbursts of information, as it is now, we have no choice but to absorb it as best we can. When the Sun speaks, we listen.

And new information from the Sun is the chief cause of internal, psychological, and spiritual change. It interrupts our regular sense of change and direction (sunshine), with an injection of pure spirit that turns the wheel of our personal internal life, causing things to speed up and happen more swiftly than they otherwise would, for better or for worse. These can be very creative times or they can push us into alternative states of consciousness and spiritual growth.

Again, if this topic interests you, please see all the work I have done on it at the links above.

This is just a pointing out that a major flare event has taken place.
